ForgeRock®

ForgeRock Identity Cloud Packages

The ForgeRock Identity Cloud is the market's first comprehensive identity platform as a service. Built for organizations looking for a comprehensive, enterprise-grade identity platform that delivers usability, customizability, and operational cost savings, Identity Cloud is packaged to meet your needs and align with your unique consumption model of the ForgeRock Identity Platform.
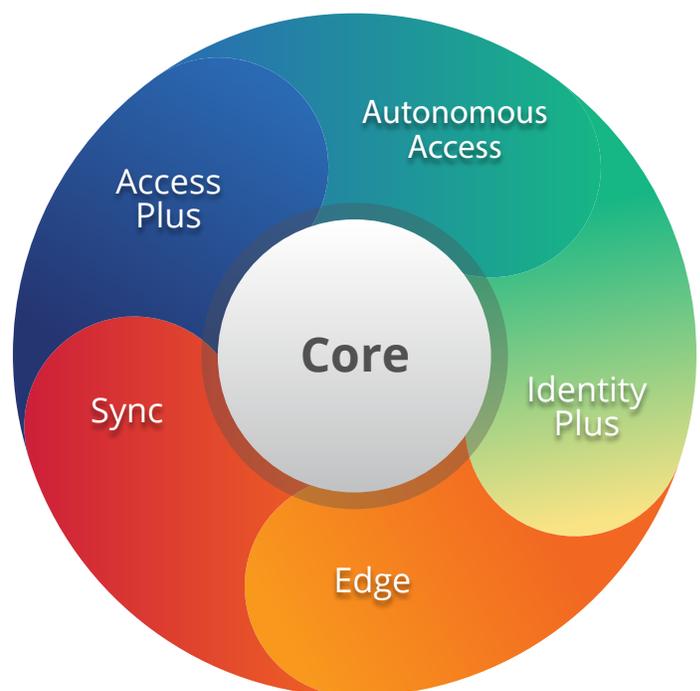

Identity Cloud Packages

Core

The ForgeRock Identity Cloud Core package provides industry-leading technology essential to meet the demand for superior digital experiences. The Core package is designed to solve the majority of your Identity and Access Management (IAM) use cases with a single offering. This includes identity management, access management, single sign-on (SSO) and federated SSO, adaptive and multi-factor authentication (MFA), as well as strong authentication factors, including one-time passcode (OTP), email confirmation, Mobile Push, Magic Link. Core also integrates seamlessly with ForgeRock's software development kits (SDK) for ease of implementation with your applications.

To address additional requirements, the Identity Cloud Core package can be customized through the upgrade packages: **Access Plus**, **Autonomous Access**, **Identity Plus**, **Edge**, and **Sync**.

The ForgeRock Identity Cloud Product Packages

Access Plus

The Identity Cloud Access Plus package provides increased security while improving user experience with capabilities such as passwordless and usernameless authentication and support for Zero Trust and CARTA strategies. Additionally, organizations requiring more contextual and fine-grained authorization enforcement components can leverage Access Plus to enforce continuous and contextual authorization for transactions. Access Plus also includes dynamic scopes and continuous risk monitoring capabilities.

Autonomous Access

The Autonomous Access package leverages a unique combination of AI, machine learning (EUBA), advanced pattern recognition (heuristics), and big data to provide risk scores to help stop known bad actors, flag anomalous behavior, and learn about new and emerging cyberthreats. Built into ForgeRock's Intelligent Access, it includes out-of-the-box threat protection nodes and drag-and-drop configuration, making it easy for your teams to create any number of personalized user access journeys based on identified risk scores.

Edge

The Edge package extends the security capabilities of ForgeRock Identity Cloud to legacy applications on premises and to modern microservices running in the cloud. Edge enables you to coexist Identity Cloud with other legacy IAM solutions and augment legacy or home-grown applications with modern IAM capabilities, giving you the time you need to execute on your cloud migration and security strategy. Edge also includes ForgeRock Identity Gateway capabilities to create a secure perimeter for legacy applications and modern API traffic.

Identity Plus

The Identity Plus package manages user identity data and provides users with a privacy and consent dashboard that allows them to download, update, or delete personal information, as well as give consent to use their data. Identity Plus also includes social identity registration and login, personalization, delegation, and user dashboards. ForgeRock Identity Plus supports all leading social identity providers out of the box, along with other identity providers supporting OAuth2 or OpenID Connect.

Sync

The Sync package includes a full-featured outbound provisioning engine with complete bi-directional and translatable synchronization to various systems and applications. Sync discovers new, changed, deleted, or orphaned accounts to determine user access privileges, and reconciles them seamlessly to ensure that user identity data, including passwords, are always accurate. It ensures that you have a stable hybrid environment where all identity data is consistent across all systems.

Get Started With the Identity Cloud Package That Fits Your Needs

ForgeRock Identity Cloud packages give you the usability, customizability, and operational cost savings required to meet your unique goals and requirements today as well as tomorrow.
