

ForgeRock Autonomous Access QuickStart Services

Achieve rapid results with your AI-driven threat prevention solution

Driving Your “Go-Live” Success

Organizations always have expectations of new technology solutions. In most cases, they want them to help drive revenue, reduce costs, improve efficiency, or enhance security...or some combination of the above.

The challenge is that brand-new solutions come with a learning curve, and your organization’s internal resources are finite. Too often, the initial results of a new technology implementation fall short of expectations.

Rather than DIY the project in-house, you can achieve better results by engaging your technology vendor. You can utilize their expertise to jumpstart the solution to operate in your unique environment. This way, you can ensure the goals and metrics you have in mind at the beginning of the project will be realized on your timeline.

ForgeRock Autonomous Access QuickStart Services are pre-packaged engagements designed to help you get the most out of your Autonomous Access solution.

They include a package of high-touch, pre-planned activities between your team and ForgeRock that focus on implementation, baseline configuration, model tuning, and confirmation that the Autonomous Access solution is meeting your expectations. You’ll come out of the engagement with a solution that does what you want it to do from the moment you turn it on.

Features

Mission Focused

Ease the burden of rollout with carefully planned and choreographed activities.

Implementation by Design

Focus your technical and business goals — and how the Autonomous Access solution should work in your unique environment.

Demonstrable Success

Reduce project rollout risk by seeing how the solution works in your environment before it goes live.

Documentation and Enablement

Work alongside ForgeRock subject-matter experts to document all aspects of the deployment and equip your team for future success.

Key Benefits

Achieve Predictable Outcomes

Rapidly reach the metrics you set out to accomplish and shorten time-to-value (TTV) of your new technology investment

Improve Day-One Experience

Demonstrate tangible results, such as cost savings, risk-reduction, improved experience, and stronger security, from the start

Gain Team Skills

Expand your team’s capabilities with knowledge and skills developed during the QuickStart service time period.

AI-Driven Access Done Right

ForgeRock Autonomous Access employs artificial intelligence (AI) and machine learning (ML) techniques to optimize or make decisions related to user access. While the solution bundles all this under the covers, setting it up correctly to work in your environment is what QuickStart focuses on.

Autonomous Access QuickStart Service includes (sample activities):

- Engagement preparation
- Business and technical overview
- Integration and configuration of Autonomous Access nodes
- Engagement summary report
- AI/ML model tuning and risk sessions

Additional ForgeRock Professional Services can be individually quoted to meet your needs and timelines.
