

ForgeRock Managed Security Solutions (MSS) with PwC

Our Approach to Managed Security Solutions

There is a subset of activities outside of traditional ForgeRock implementation services and day to day operations services that are important for continuous improvement, but challenging for companies to fund and address with a dedicated project team or traditional contingent labor sources. This gray area has resulted in a **gap in needs**.

ForgeRock Operations, Our Value Proposition

The Demand for ForgeRock Managed Support

Our clients' ForgeRock Operations teams have restricted availability and are often not equipped with immediately available skills to provide support for day to day ForgeRock requirements and continuous improvement work. Hiring a full staff is not financially feasible, nor is the staff with the right capabilities always available for hire. However, service demand mandates support.

ForgeRock programs need sustained capabilities that are:

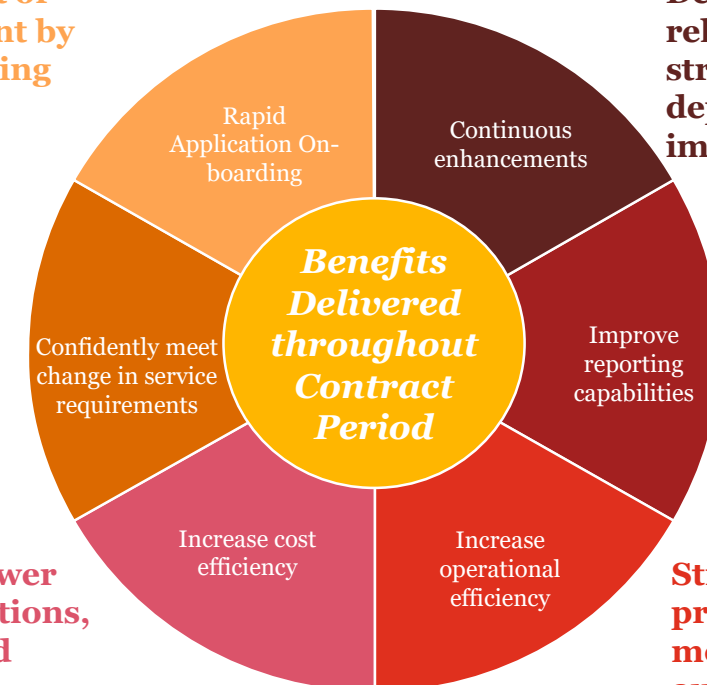

- Skilled with operating a ForgeRock environment that is integrated with the client's critical enterprise and customer facing applications
- Able to understand the unique configuration, DevOps scripts and automation capabilities of a ForgeRock implementation
- Capable of understanding integration patterns for rapid onboarding of applications
- Capable of understanding end-user and systemic issues, then triaging effectively
- Able to meet immediate and tailored client development and support demands, even if that is 24 hours a day and/or 7 days a week

ForgeRock MSS Program Benefits

Increase the value out of ForgeRock deployment by faster on-boarding using PwC's unique rapid onboarding toolkit

Leverage a flexible and scalable resource pool from a large security firm (3,200 global practitioners)

Gain maturity with lower expenditure on operations, risk management, and oversight

Deliver efficiency through relevant and effective strategies consistently deployed to meet solution improvement opportunities

Enable greater control and rigor over the solution management process through unified reporting

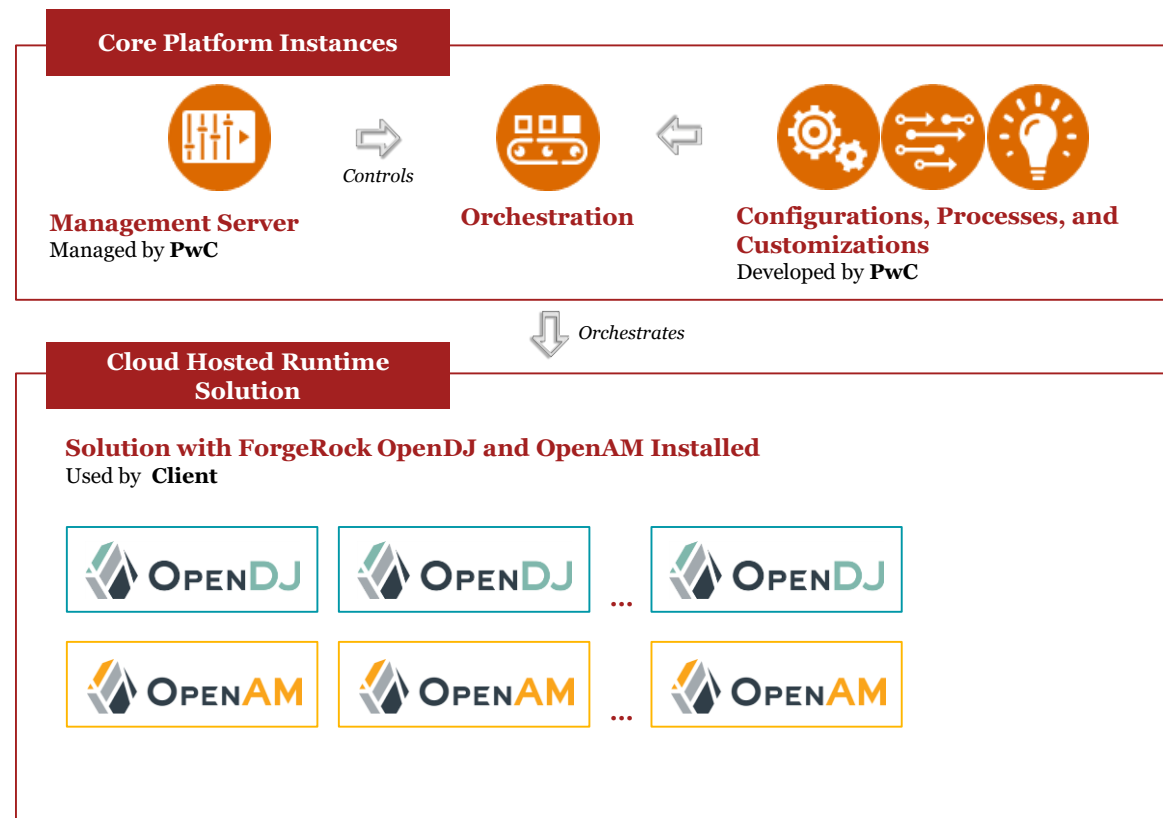

Streamline and improve processes by utilizing key metrics, DevOps automations and providing the manpower required to drive improvements

PwC Forgerock Identity Platform as Service

Why PwC's ForgeRock Identity Platform as Service?

Majority of IDaaS solutions available in market are still evolving and often inadequate to meet all complex business requirements of managing Digital Identity and their Access across multiple platforms.

PwC developed and managed cloud ready IAM platform built on top of ForgeRock DevOps and industry standard cloud tools enables rapid deployment. A cloud agnostic solution matching IDaaS platform for ease of deployment and operations but giving flexibility for on-premise IAM solution to support complex business requirements.

How PwC can help

PwC Identity Platform as a Service (IdPaaS) helps provides client with an orchestration and management platform which can be used to rapidly instantiate virtual private runtime platforms.

Model 1:

- PwC utilizes it's unique cloud ready ForgeRock platform to host on client's cloud infrastructure.
- PwC provides complete implementation and managed services

Model 2:

- PwC hosted and managed ForgeRock platform in PwC cloud infrastructure for client.
- PwC provides complete implementation and managed services

Key Benefits

- Faster time to market
- Cloud-agnostic solution with dynamic scaling capabilities to optimize infrastructure cost during peak or no-peak usages
- Zero downtime maintenance and patching
- Adheres to regulatory compliance requirements
- A complete managed solution

Helping Build Your ForgeRock Managed Solution
