

ForgeRock Identity Cloud

Comprehensive. Simple. ForgeRock.

Your organization requires a comprehensive and highly available identity platform. It needs to connect the right information or service at the right time and place. It needs to engage with your customers, workforce, and things in a frictionless, personal, and easy way. And it needs to protect, secure, and ensure that the privacy and regulatory requirements are also being addressed. That is why your organization needs the comprehensive solution offered by ForgeRock Identity Cloud. It is the only comprehensive and integrated cloud platform on the market today for all your identity needs.

By transitioning off your homegrown or legacy identity solution, you will see immediate benefits with the ForgeRock Identity Cloud.

Say goodbye to passwords and usernames.

ForgeRock leverages the latest WebAuthn standards to enhance the user's experience. Go completely passwordless and allow your customers, workforce, and partners to log into all your backend systems without using a password. Take that a step further, and make it even easier with no need to select a username.

Authorize anyone, anything.

Continuously authorize that the user is who they say they are and that no one is impersonating them via contextual authorization. ForgeRock implements Macaroons, CIBA, and other standards to provide a more holistic view of your customers, no matter what device they choose to use.

Find the right balance of security and convenience.

Create dynamic and personalized user flows. Authenticate and provide unique access experiences based on geography, device type, biometrics, and more. With our improved graphical authentication trees, you can now allow your users to choose their favorite way to login by allowing yourself some breathing room to innovate new ways to login safely by partitioning off small segments of users to try new login experiences. And also get all the analytics you need to test your A/B testing hypothesis.
