

ForgeRock Identity Governance

Cloud-Native Identity Governance for the Modern Enterprise

Any CISO will tell you that identity governance and administration (IGA) is hard and getting harder with the expansion of the hybrid workforce and the aggressive adoption of cloud-based applications and services. Traditional identity governance solutions are costly and complex, often failing to deliver a return on investment.

Why? Because they are manually driven and built on legacy concepts. As a result, they cause security and IT teams to fall behind in their effort to provide employees, contractors, and partners with access to business applications and resources. Today's ever-changing business environment requires a new, dynamic approach to identity governance.

ForgeRock Identity Governance is a cloud-native governance offering designed to help solve security and compliance challenges for large, complex enterprises at scale.

Key Benefits

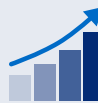

Reduce Operational Costs

Save money and eliminate long deployments by simplifying cumbersome activities, such as application onboarding, access request reviews, and periodic certifications using an AI-infused governance process.

Stronger Scalable Security Coverage

Deliver the security, scale, and resiliency needs of large, complex enterprises by leveraging fully isolated cloud resources with the power to process millions of permissions across thousands of apps in minutes.

Boost Workforce Productivity

Accelerate access to business applications and resources with automated day one new hire access, and enable employees to work securely from any location, on any device.

Features

Identity Lifecycle

Automate and manage the joiner, mover, and leaver lifecycle stages for all users. Get all your employees up and running fast with the business resources they need to do their jobs.

Segregation of Duties

Enable least-privileged access by applying and enforcing preventive and detective segregation of duties (SOD) checks when and where you need them.

Access Certifications

Accelerate access decision-making with high-initiative access certifications embedded with AI-determined access recommendations and confidence scores.

Access Requests

Empower users with a 24/7 self-service access request portal and automate application access with pre-configured workflow templates.

Our Approach: Full IGA Suite at Enterprise Scale

We have combined our unique cloud architecture and proprietary AI and machine learning (ML) with Google Cloud Platform (GCP) to deliver the hyperscale required by today's large enterprises. ForgeRock Identity Governance helps organizations make faster and more informed decisions, and even automates low-risk decisions to reduce workloads for IT teams.

ForgeRock's approach creates the industry's most complete offering. It combines three primary components:

- Access certifications to accelerate access decision-making with AI-determined recommendations and confidence scores
- Access requests to provide users with a 24/7 self-service portal and automated application access
- Segregation of duties to ensure regulatory compliance when and where you need it

Differentiators

Comprehensive IAM Platform

ForgeRock Identity Governance is a part of a unified IAM workforce solution that helps manage, secure, and govern all identities throughout their entire lifecycle - all from a single platform.

Cloud Hyperscale

Purpose-built cloud architecture rapidly processes and analyzes your organization's access data in order to meet the scale and resiliency needs of large, complex enterprises. Combined with a unique security and privacy model based on full tenant isolation, your data is protected from noisy neighbors at enterprise scale.

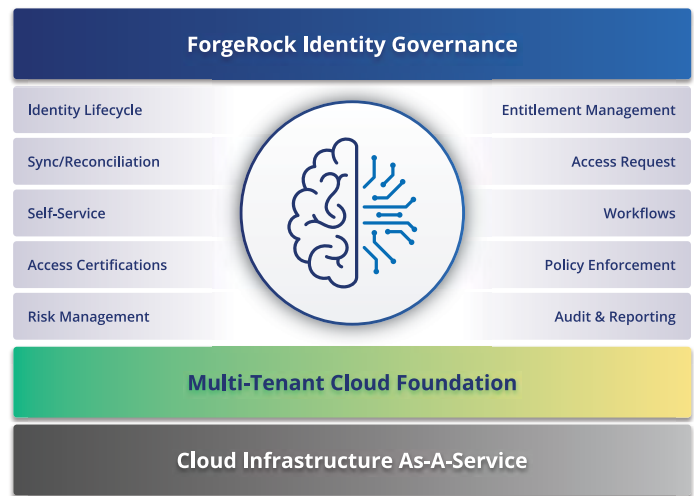

AI-Infused Access Certifications

Leverages AI and machine learning to generate user access recommendations and confidence scores to help managers make quicker access decisions and complete access reviews faster, in fewer clicks.
