

ForgeRock Cloud Migration Assessment Service

Gain insights for a smooth and cost-effective transition from self-managed to the cloud

Reduce the Risk of Cloud Migration

Organizations are under growing pressure to re-examine every aspect of their strategic and operational needs. This examination often leads to the decision to consume services in the cloud. As your identity solution, cloud adoption can result in cost savings, new features, and greater flexibility for your admins and your users. But the key is getting it right and knowing the risks up front.

Like all customers that move their mission-critical ForgeRock service from an on-premises, self-managed platform to the cloud, you're likely to have a range of questions:

- *Can regulatory and compliance needs be achieved at the same level?*
- *Can tangible benefits be returned to the organization?*
- *Where are the potential challenges and how do we best overcome them?*

What you need is a methodical approach that assesses and re-imagines your particular self-managed deployment moving to the cloud. This cannot be achieved with a cookie-cutter migration checklist that misses key elements of your unique situation. Handling this assessment on your own can be time-consuming and may lack the insight that outside expertise can bring to the task.

The ForgeRock Cloud Migration Assessment Service is a workshop engagement designed to deliver detailed insights into what it would take to move your ForgeRock Identity Platform to cloud (SaaS) delivery.

This consultative service identifies opportunities for realizing greater benefits to your organization driven by cloud adoption. It identifies challenges and provides options for resolution. It explores options for improvement and shortens the time-to-value (TTV), so you can focus more on your business objectives.

Most importantly, you and your team are always in control. The final report assembled by ForgeRock migration experts gives you comprehensive information to help you determine when — or if — the move to the cloud makes sense according to your priorities and timelines.

Key Benefits

Reduce Migration Risk

Uncover potential obstacles and risks associated with moving to the cloud. Learn about new capabilities and potential cost savings.

Align with Business Strategy

Align your identity and access strategy with your organizational goals. Achieve verifiable outcomes as you modernize your deployment to meet the latest standards and take advantage of the most current features.

Plan for Success

Gain insights into how you would migrate to the ForgeRock Identity Cloud along with factors to help you decide if you should.

THE CLOUD MIGRATION ASSESSMENT SERVICE AT A GLANCE:

Pre-Work, Engagement, and Output

The Pre-Work

The Cloud Migration Assessment Service begins with the customer providing ForgeRock information about the organization's current deployment. This helps our team start the work of planning the optimal migration and modernization route for your organization.

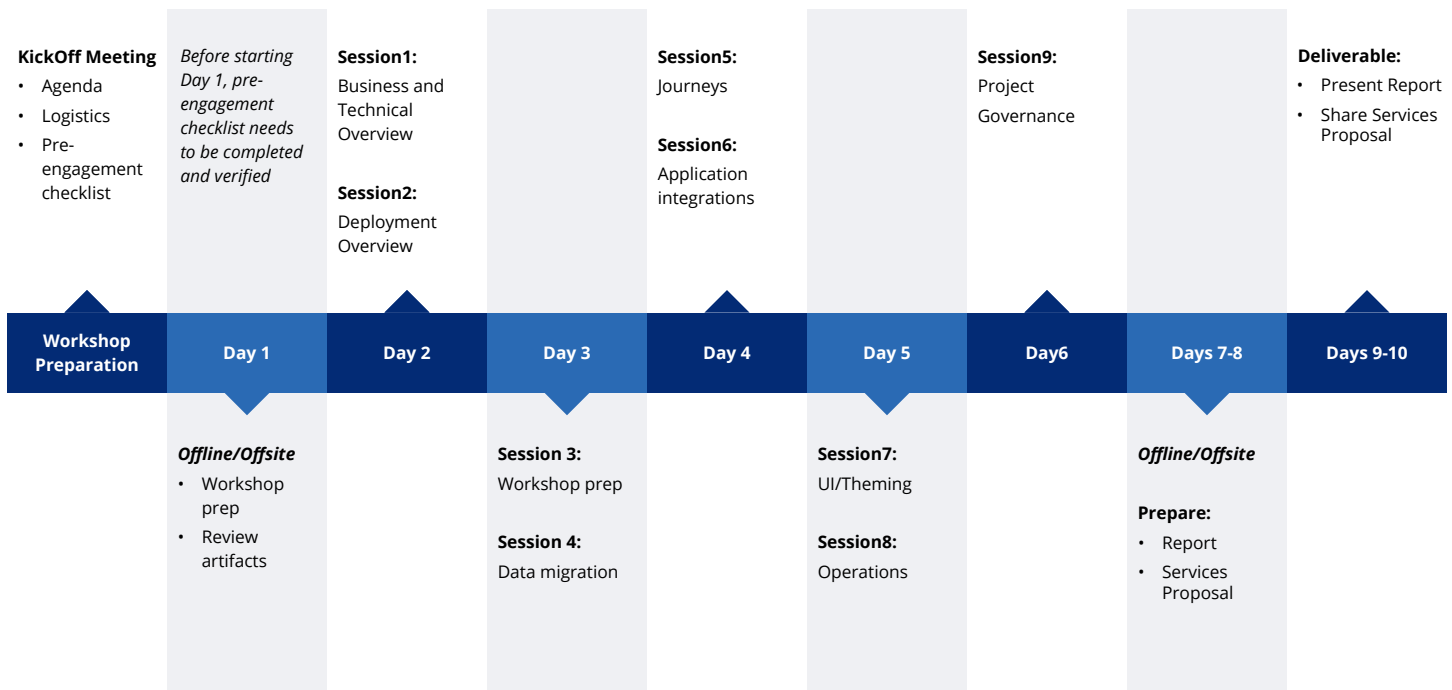

We ask you to provide several pieces of information, including:

- High-level architecture and deployment diagrams
- An inventory of the integrated applications
- Additional information, such as required ForgeRock configurations, extracts, and associated customizations

This information can be provided by opening up a ticket with [ForgeRock support](#). Any information shared with ForgeRock is treated with the utmost confidentiality.

The Engagement

A workshop engagement lasting 7–10 business days is kicked off. During the workshop, ForgeRock Identity Cloud experts work with the information provided, along with your team of experts, to develop a structured plan that covers all your business and technical goals. The schedule is set on your timeline and can be fine-tuned according to your specific engagement and resource availability. A sample agenda of the workshop typically looks as follows:

The Output

Upon completion of the workshop engagement, a **Cloud Migration Assessment Report** is produced for your organization. This detailed report is customized to your particular deployment and may cover the following information:

Transition Plan

- Target Architecture
- Environment Mappings
- Proposed Timeline
- Go-Live Scope – MVP (Minimum Viable Product)
- Risks and Mitigations

IAM Domains

- Functional domains:
 - Object Modeling
 - Data Migration
 - Journeys
 - Application integrations
 - Authorization
 - UI/Theming
 -
- *Non functional domains:*
 - Operations
 - Monitoring

Migration

- Current State
- Customizations
- Migration Strategy
- Transformations and Improvements

After review of the report, the next steps are up to you. ForgeRock Professional Services will assist in scoping the services necessary to maximize the potential for a successful migration from self-managed to the ForgeRock Identity Cloud.

About ForgeRock

ForgeRock® is a global digital identity leader helping people simply and safely access the connected world. The ForgeRock Identity Platform delivers enterprise-grade identity solutions at scale for customers, employees, and connected devices. More than 1,300 organizations depend on ForgeRock's comprehensive platform to manage and secure identities with identity orchestration, dynamic access controls, governance, and APIs in any cloud or hybrid environment.
