

ForgeRock Access Management

Secure and Seamless Experiences for Your Customers and Workforce

Today's Modern Access Challenges

Today's organizations are challenged with managing multiple identities: consumers, workforce, and devices. While each has their unique requirements, they all need secure, seamless, and easy online access experiences. Many organizations are managing these identities through legacy identity and access management (IAM) platforms that consume time, resources, and budget to deliver the most basic services.

Global organizations need to evolve and adopt modern access management solutions that support exceptional digital experiences for consumers, workforce, and things. They need scalable, adaptable solutions that can easily integrate with new technologies and applications while protecting the organization against current and future cyber threats.

ForgeRock Access Management

ForgeRock Access Management is a unified solution that addresses the complex access needs of today's modern organization. Access Management enables organizations to deliver great online experiences, migrate away from burdensome legacy platforms, and provide stronger security.

ForgeRock Access Management supports all user profiles from a single platform:

Customers

Ensuring that your customers have frictionless access to online accounts and easy ways to manage their profiles means exceptional online experiences that lead to repeat business.

Workforce

Employees, contractors, partners, vendors typically have access to sensitive systems, applications, and networks and require instant, hassle-free access. Organizations need assurance of who these users are before granting access to valuable business assets.

Things

Organizations need to know what IoT devices are on their networks and need to manage these devices just as they do their human identities.

ForgeRock Access Management Features

ForgeRock Access Management is a critical component of the comprehensive, artificial intelligence (AI)-powered ForgeRock Identity Platform. It includes the following capabilities:

ForgeRock Intelligent Access

is an intuitive drag-and-drop interface that allows for orchestrated authentication flows with more flexibility, choice, and security than traditional authenticators. ForgeRock Intelligent Access can easily configure, measure, and adjust multiple login journeys within Zero Trust and CARTA security models.

ForgeRock Single Sign On (SSO)

is a service that securely shares identity information across domains and applications using standard identity protocols. Users need only login once to securely access all of their applications.

Federation

is a service that securely shares identity information across different environments, so users can access partner systems with the same authentication methods they use for their company network.

Passwordless Authentication

with ForgeRock Go helps secure the organization and users with low-friction passwordless and usernameless authentication. It makes available a range of seamless methods – biometrics, behavioral, and risk-based – to support all user access scenarios.

Managing IoT identities

with ForgeRock Access Management lets organizations take care of the identity of IoT devices the same way they do human users – with onboarding, authentication, and full lifecycle management.

Authorization

policies from simple, coarse-grained rules to highly advanced, fine-grained entitlements are fully supported. With ForgeRock Access Management, organizations can ensure that just the right amount of access control is given to each consumer, workforce, and thing in your organization.

Why ForgeRock Access Management?

Deliver Great Online Experiences

- Design, test, and roll out access experiences that delight users
- Deploy the latest social login, biometric, and frictionless authentication methods
- Retain customers with fast, low-touch, yet secure online transactions and mobile channel engagement

Accelerate Legacy Migration

- Modernize your IAM with a proven, tested methodology
- Migrate at your own pace, converting applications when you are ready
- Regain IT and security resources and eliminate silos

Secure the Organization

- Enforce consistent security policies that apply across all applications and platforms
- Contextually authenticate users using risk-based factors
- Continuously authorize user access using Zero Trust and CARTA* security models

*Continuous Adaptive Risk and Trust Assessment

ForgeRock Access Management enables engagement with users by providing a secure, seamless, and positive online experience. Customers will keep coming back, and the organization will reap the revenue. Internal users also benefit, with predictable and secure access to the applications, networks, and platforms they need to stay productive.
